                                                                                                                                                                                                                                     The present sequence is a phosphodiesterase (PDE) interacting protein, CC M14 from rat. The protein modulates the functions and properties of PDEs, CC specifically cAMP-PDEs, and also targets them to specific subcellular CC compartments. The present sequence CC can be used in the diagnosis and treatment of disease conditions CC associated with PDE activity. The disease include asthma, cystic CC fibrosis, inflammatory airway disease, chronic bronchitis, cosinophilic CC granuloma, psoriasis, proliferative skin disease, endotoxic shock, CC septic shock, ulcerative colitis, Crohn's disease, reperfusion injury, CC inflammatory airway disease, urticaria, adult respiratory CC distress syndrome, diabetes insipidus, allergic rhinitis, allergic conjunctivitis, vernal conjunctivitis, arterial restenosis, atheroselerosis, inflammatory diseases associated with irritation and CC atheroselerosis, inflammatory diseases associated with irritation and CC pain, rheumatoid arthritis, antylosing spondylitis, transplant creftion and graft versus host disease, disease conditions associated with hypersecretion of gastric acid, and disease conditions in which

                                                                       The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                              830 Primers useful for synthesizing use in genetic manipulation -

ity). ANEOUS: Overexpression results in the inhibitic rrin uptake and the blockage of the clathrin-me osis. ITY: Contains 1 C2 domain. ITY: Contains 1 DBL-homology (DH) domain.	ISOId=Q9ZOR4-2; Sequence=VSP_004296; -i-TISSUE SPECIFICITY: Widely expressed. Expressed at high levels in brain, heart and skeletal musclei- DOMAIN: SH3-3, SH3-4 and SH3-5, but not SH3-1 and SH3-2 domains, bind to dynamin (By similarity)i- DOMAIN: The KLERQ domain binds to SNAP-25 and SNAP-23 (By		"Mouse homologues of human chromosome 21 genes."; Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases. -I- FUNCTION: Adapter protein that may provide indirect link between the endocytic membrane traffic and the actin assembly machinery. May regulate the formation of clathrin-coated vesicles. -I- SUBUNIT: Interacts with dynamin, SNAP-25 and SNAP-23. Clusters several dynamin in a manner that is regulated by alternative splicing. Also binds clathrin-associated proteins and other components of the endocytic machinery, such as N-WASp, Eps15 and Stonin 2 (By similarity).	SEQUENCE FROM N.A. (ISOFORM 1). MEDLINE-99164083; pubMed=10064583; Sengar A.S., Wang W., Bishay J., Cohen S., Egan S.E.; Sengar A.S., Wang W., Bishay J., Cohen S., Egan S.E.; "The EH and SH3 domain Ese proteins regulate endocytosis by linking to dynamin and Eps15."; EMBO J. 18:1159-1171(1999). Chem. 274:18446-18454(1999).

FUNCTION: Adapter protein that may provide indirect link between the endocytic membrane traffic and the actin assembly machinery.

May regulate the formation of clathrin-coated vesicles.

SUBUNIT: Interacts with dynamin, SNAP-25 and SNAP-23. Clusters several dynamin in a manner that is regulated by alternative splicing. Also binds clathrin-associated proteins and other components of the endocytic machinery, such as N-WASp, Eps15 and Stonin 2 (By similarity).

SUBCELULUAR LOCATION: Cytoplasmic; membrane-associated protein.

Enriched in synaptosomes.
                                                                                                                                                                                                                                                                                                                                                                              bind to dynamin.

-i- FUNCTION: Adapter protein that may provide indirect link between the endocytic membrane traffic and the actin assembly machinery. May regulate the formation of clathrin-coated vesicles. Isoform is could be involved in brain-specific synaptic vesicle recycling.
-i- SUBUNIT: Interacts with dynamin, SNAP-23 and SNAP-23. Clusters several dynamin in a manner that is regulated by alternative splicing. Also binds clathrin-associated proteins and other splicing. Also binds clathrin-associated proteins and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pucharcos C., Casas C., Nadal M., Estiv

ITSSUE SPECIFICITY: Ubiquitous in adult and fetal tissues, excisoform 1 which is expressed almost exclusively in the brain. Highly expressed in skeletal muscle, heart, spleen, ovary, tes and all fetal tissues tested. Expressed at lower levels in the blood, lung, liver and pancreas. Isoform 1 is expressed in all brain regions; not expressed in the spinal cord.

DOMAIN: SH3-3, SH3-4 and SH3-5 but not SH3-1 and SH3-2 domains bind to dynamin (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Compositions (By similarity).

Stonin 2 (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic; membrane-associated convicted in synaptosomes (By similarity).

IsoSUB SPECIFICITY: Ubiquitous. Isoform 1 is primarily expression adult heart and liver.
In adult heart and liver.
IMISCELLANEOUS: Overexpression results in the inhibition of the transferrin uptake and the blockage of the clathrin-mediated

                                                                                                                                                                                                                                                                                                                                                                                          the regulation of mitogenic signals and control of cell proliferation. Involved in the internalization of ligand-inducible receptors of the receptor tyrosine kinase (RTK) type, in particular EGFR (By similarity).
SUBUNIT: Interacts with Stonin 2. Interacts with considering sites.
rogue activator protein.
SIMILARITY: Contains 3 EH domains.
SIMILARITY: Contains 2 EF-hand calcium-binding domains.
SIMILARITY: Contains 2 ubiquitin-interacting motif (UIM) repeat.

                                                                                                                                         TISSUE SPECIFICITY: Ubiquitously expressed.

PTM: Phosphorylation on Tyr-849 is involved in the internalization of Edgr. Not required for membrane translocation after EGF treatment or for targeting to coated pits, but essential for a subsequent step in EGFR endocycosis (By similarity).

DISEASE: Involved in a t(1;11)(p32;q23) chromosomal translocation in acute leukemias causing fusion to the trithorax (MLL or HRX) gene product which contains DNA-binding motifs resulting in a
                                                                                                                                                                                                                                                                                                                                                            SUBCELLULAR LOCATION: Cytoplasmic. Recruited to the membrane upon EGFR activation and localizes to coate
